

NAME

`extconv` – convert a TeX document in either Big 5+ or GBK encoding into ‘preprocessed’ form.

SYNOPSIS

`extconv <infile> >outfile`

DESCRIPTION

Big 5+ and GBK encodings use the characters {, }, and \ which have special meanings in \TeX documents.

After processing a $\LaTeX 2_{\epsilon}$ document which contains such characters with `extconv` you need not care about these special characters.

This filter is part of the **CJK** macro package for $\LaTeX 2_{\epsilon}$.

SEE ALSO

`bg5conv(1)`, `sjisconv(1)`, `cefconv(1)`, `cef5conv(1)`, `cefsconv(1)`,
the **CJK** documentation files.
